**RE: Service Welding and Ship Building, Lemont, Illinois**

Dear Dr. Carr:

On behalf of Service Welding and Ship Building, ENvironmental Management and Resource Consultants, Inc. (ENMARC) is herein submitting additional photographic documentation of the continuation of the installation of secondary containment upgrades pursuant to the facility's SPCC Plan. These upgrades specifically include the following:

1. Installation of a second containment system adjacent (due west) of the first secondary containment system installed. A total of eight product ("soapstock") storage tanks are to be re-located to this containment area, three of which the re-location thereof has already been completed.
2. Installation of upgraded pipe rack system and dock house specific to transfer operations.
3. Unused tank removal and debris cleanup along the east side of the barge slip
4. Location of on-site Emergency Response Trailer (EMC). Service Welding/EMC employees (plant personnel involved with operations) have completed 40 Hour OSHA Training in accordance with 29 CFR 1910.120 in anticipation of providing commercial emergency response services to industry. The additional training will assist in the management of spills associated with on-site bulk plant storage operations.

The enclosed letter represents the continued actions that Service Welding/EMC has implemented in order to demonstrate compliance with the applicable SPCC regulations. As further upgrades are implemented throughout the course of this project, additional documentation shall be forwarded to your office. At such time that all upgrades are complete, a revised, independently certified SPCC plan will be submitted to USEPA.

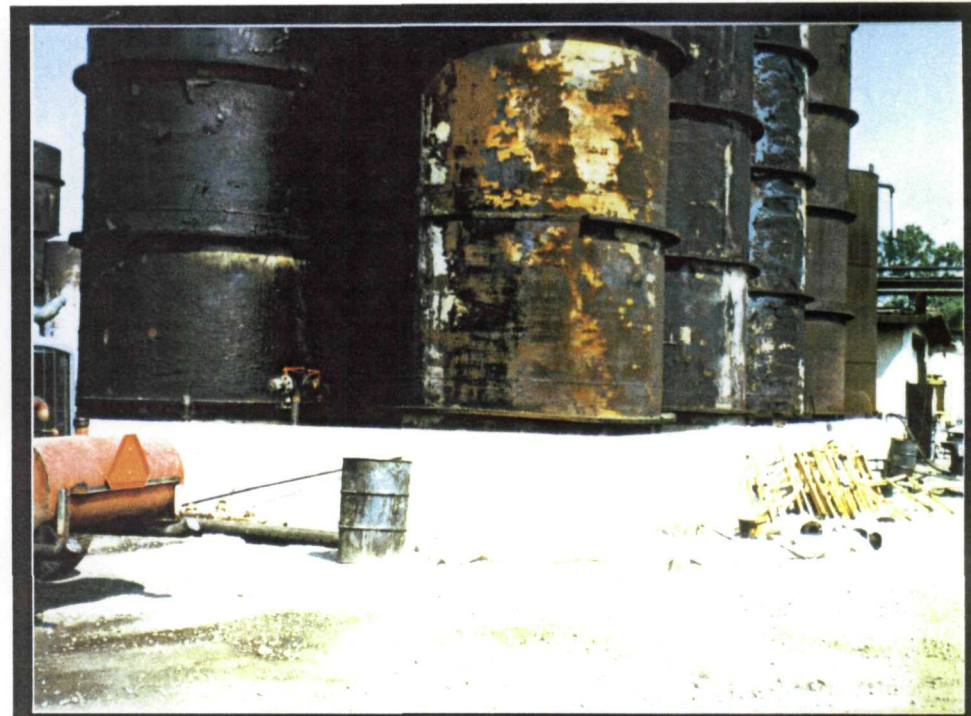

Should you have any further questions regarding the enclosed, feel free to contact the undersigned @ (708)257-9357, or Mr. Dennis Egan, President, EMC @ (708)739-0947.

Sincerely,

  
Jeanette Virgilio, President
